

introduction to the mathematics of general relativity - *the mathematics of general relativity are complex in newton's theories of motion an object's length and the rate at which time passes remain constant while the object accelerates meaning that many problems in newtonian mechanics may be solved by algebra alone in relativity however an object's length and the rate at which time passes both change appreciably as the object's speed, **tensor from wolfram mathworld** - an n th rank tensor in m dimensional space is a mathematical object that has n indices and m^n components and obeys certain transformation rules each index of a tensor ranges over the number of dimensions of space however the dimension of the space is largely irrelevant in most tensor equations with the notable exception of the contracted kronecker delta,*

lecture notes on general relativity arxiv - iii preface these lectures represent an introductory graduate course in general relativity both its foundations and applications they are a lightly edited version of notes i handed out while, **geometric algebra a collection of useful resources** - geometric algebra is a very convenient representational and computational system for geometry we firmly believe that it is going to be the way computer science deals with geometrical issues,
